(54) Title: **APPARATUS FOR DISTRIBUTING ELECTRICAL POWER AND/OR COMMUNICATION SIGNALS**

(57) Abstract: In one embodiment, an electrical power distribution apparatus is disclosed which includes a track made up of a plurality of track sections (100) connected together by/to joints and end sections. The track sections (100) are each provided with a slot with which a power point connector (400) may be engaged at any point by inserting a contact member of the connector (400) through the slot at a chosen point and then rotating the connector (400) by 90 degrees to bring the contact member into engagement with electrical conductors (126, 128) of the track. The apparatus may comprise a further conduit containing conductors used to distribute communication signals.
